

**Bridge the
gap**

between your
customers

and your
**business
systems**

Go Integrator

Go Integrator is a powerful, unified communication software suite. It allows users a level of integration, communication and collaboration with their BroadWorks hosted telephone system, other phone system users, and the organization's internal business systems.

- Improve the quality and professionalism of your call handling and the caller's experience
- Increase the productivity and collaboration of your phone system's users
- Reduce the time and costs involved with making and receiving large volumes of calls
- Realize the full potential of your hosted telephony solution

Call Control

Without needing to touch their handset, a Go Integrator user has access to a full range of control over inbound and outbound calls, including dialing, answering, transfer, consult and hang-up.

The new Toolbar replaces the Phone Window providing the features of the Phone Window but in a smaller, dockable format. It also includes features essential for use by Call Centre Agents significantly enhancing their user experience. The features visible on the toolbar are controlled by the services assigned to the user and the license type, for example the agent features will only show for users with a DB license and assigned BroadWorks Call Centre services.

Caller Preview

For both inbound and outbound calls, if a match for the caller is located in any integrated directories, the caller's summary details are displayed on screen. This allows the Go Integrator user to see who is calling them before they answer the call.

Contact Searching & Popping

Concurrently search many supported business applications manually (as required) or automatically (as calls come in). If a caller is located in an integrated application, their full details can be quickly "popped" on screen.

Address Book

Details of a new caller can be easily saved in the user's personal directory. Both the enterprise and personal directories can be searched and dialed from the results.

Activity Logging*

Record activity in business applications for all calls made and received.

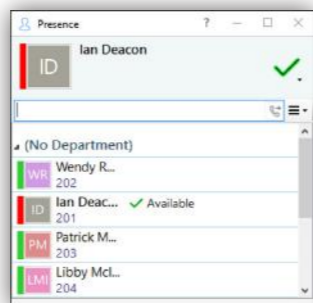

Recent and History Lists

Users can quickly view a list of the most recent calls that they have made or received, or a fuller history list of inbound and outbound calls. Any telephone number in these lists can be redialed with one click.

Real-Time Presence

The Presence screen allows Go Integrator users to check the busy status of their colleagues' extensions. You can also see who your colleagues are talking to if there is a match with an integrated application. This feature greatly improves coordination and collaboration between users.

The Go Integrator DB desktop client offers the full call control functions, call history, contact searching/popping, extension presence, as well as integration with Microsoft Outlook, Lotus/IBM Notes and Google Contacts. It also offers additional integration into many other standard applications and systems.

* Currently available with a limited range of business applications - see gointegrator.com for the full, up-to-date list.

STANDARD INTEGRATIONS

 - Zendesk
 - Zoho CRM
 - Zoho Phonebridge (CRM/Desk)
- * denotes activity logging support

Standard integrations are available by default within Go Integrator client and installation can be completed by the reseller / end user using the add-in guide provided. Standard integrations use open APIs or benefit from partner agreements with the business application developer and it is expected that support for future release will be maintained.

Go Integrator now supports activity logging.

See gointegrator.com for the full, up-to-date list of supported business applications.

CONTROLLED INTEGRATIONS

Controlled integrations have typically been provided on a customer project basis and either a limited agreement or no agreement is maintained with the application developer and support for future releases might not be available. The integration add-in is not available by default within the Go Integrator client and must be enabled by the Go Integrator developer at the time of installation. Please contact your Account Manager for more information

ADDITIONAL FEATURES
